Trauma Program Managers Course

The Trauma Program Managers Course, designed by expert Trauma Program Managers throughout the country, is a two-day, interactive course providing Trauma Program Managers, members of the trauma program, and those interested in joining the field with the core concepts of building a comprehensive trauma program.

The course covers key concepts of a trauma program, including:

- Essential components of a trauma system
- Leadership roles critical to the success of a Trauma Program
- Key components of the Trauma Program Manager role
- Important elements of a successful Performance Improvement Patient Safety Program
- Planning and preparation for trauma center verification/designation
- Best practice recommendations for trauma outreach and education
- Implementing a dynamic trauma registry.
- Understanding the trauma budget
- Design process, tools, and data that will influence optimal reporting in accordance with accepted standards within the industry

The Trauma Program Managers course emphasizes key components of a Trauma Program. This course is recognized throughout the trauma community as the premier course for learning the role and importance of the Trauma Program Manager as well as the role of other essential members of a trauma program. The American Trauma Society continues to provide the course throughout the United States. Each course is taught by expert Trauma Program Managers who bring years of experience and expertise to the program's success.

Trauma Register Course

This course is nationally recognized by the American College of Surgeons as comprehensive training for hospital-based trauma registrars.

It is designed for comprehensive training of every level of trauma registrar. Lectures are designed to build upon experience, program maturity, and institutional needs. This program also provides the trauma registrar with a desk reference, trauma related websites, and a study guide for the National Certification Exam.

A properly, nationally trained trauma registrar can accurately capture data that includes injury diagnosis, performance improvement and injury prevention.

This benefits the institution by providing:

- Knowledge and ability to identify unclear or nonspecific documentation that accounts for under coding and unclaimed reimbursement dollars.
- Accurate injury severity scores and probability of survival scores as well as mortality, morbidity, expected versus observed outcomes.
- Accurate reporting to regional, state, and national registries which allows for accurate benchmarking and ranking.
- Valid reports to help drive an efficient and effective performance improvement program to better patient outcomes, reduce complications, and increase patient satisfaction.
